

TECHNOLOGY LEARNING EXPERIENCES

We pretend we are meteorologists as we check the radar.

Children learn there are artists who create art on computers. Then the children get to draw on a computer.

We use the iPad's camera to take pictures of things we find outside, materials in our classroom, and selfies with our friends!

Just like above, we learn people can make music with computers. So we offer an opportunity for our students to make music with technology.

Other than playing educational games on the tablets, there are so many other ways we at Kiddie Academy of St. Louis incorporate technology into our curriculum.

There are a lot of things we cannot see here in our Academies or our city but, we can take virtual fieldtrips! We have taken a virtual fieldtrip to the Arch, to Antarctica, to a desert, a jungle, an art museum, and so much more! It brings our curriculum to life.

When the theme involves animals, we use the zoo live cameras to see what the animals are up to. In the spring, we get to see eagles in their nest with eggs.

Technology doesn't just include tablets and smartboards. During our health weeks, we learn about technology in healthcare - like stethoscopes. We get to listen to our own hearts!

Flashlights are another form of technology! We love to experiment with turning them on/off and shining them around our classroom. Children love to use flashlights for scavenger hunts.
